SUMMARY

Highly impactful Senior Software Engineer with a proven track record of architecting, scaling, and delivering high-throughput distributed systems across Logistics and Telecom domains. Proven track record of scaling foundational infrastructure to manage complex state transitions and millions of asynchronous data updates. Adept at leveraging advanced algorithmic problem-solving to architect resilient, performant and highly available backend services.

EXPERIENCE

SDE-3, Flexport Inc. 12/2023 – Present | Bangalore, KA

- Transformed Returns from a KTLO product into a core revenue engine, scaling ARR 7.5x from $2M to $15M through new merchant capabilities and architectural investments.
- Architected an AWS SQS event-driven layer to decouple Returns processing from external WMS, eliminating a 10s synchronous bottleneck and increasing throughput (UPH) from 15 to 32. Ensured fault tolerance via idempotent APIs, auto-retries, crons and Datadog monitoring.
- Architected and led delivery of ASOS enterprise onboarding (Flexport's largest Returns merchant). Drove cross-team alignment across Product, Channels, Warehouse, and Carrier Networks, and traveled on-site to US warehouses for smooth go live.
- Scaled cross-domain data synchronisation by building an AWS Kinesis-based CDC pipeline utilising the Outbox pattern. Managed 1M+ state updates to an OpenSearch cluster to power highly available, low-latency search.
- Promoted from SDE II to SDE III within a year; serving as the sole senior engineer on a team scaled from 2 to 8, owning end-to-end system design, architecture reviews, code reviews, various tech initiatives, on-call and hands-on technical mentorship across the Returns and Prep domains.
- Scoped technical dependencies with various teams, created clarity and enabled my team to execute tasks with velocity. Used AI to create an On-Call assistant, automated manual SOPs using claude skills and built MCP Servers to allow AI to resolve support issues.
- Architected AuthN/AuthZ, RBAC and Notifications for a new Finance platform, saving $500K in licensing. Implemented graph traversal algorithms to dynamically resolve hierarchical task visibility and approval limits across complex organisational structures.

SDE-2, Airtel Digital 07/2021 – 12/2023 | Gurgaon, HR

- Owned the Broadband Fault Repair vertical in AirtelWork (Airtel's in house workflow and Fleet Management Platform). Architected and built the full backend, scaling from initial phases to pan-India deployment handling 35,000 Service Requests (SRs/day).
- Designed and implemented the Smart SR Journey - an event-driven system for bulk-processing upto 500K network outage SRs/day, reducing customer complaints by 5K/day, and delivering Rs.150 Cr ($18M) in annual business savings. This involved creating state machines to manage all diagnostic checks and allocation of each SR.
- Promoted from SDE I to SDE II. Mentored and onboarded new team members. Modelled SR workflow as a directed graph to trigger allocations via graph edge actions, conducted cross-team code reviews, authored Low-Level Design (LLD) documents, and contributed to architecture discussions applying OOP principles, SOLID design, and established design patterns.

Software Developer, Cognizant Technology Solutions 08/2020 – 07/2021 | Kolkata, WB

- Contributed to the Voya project, focusing on Nifi based automatic report generation to various stakeholders, addressing requirements, and enhancing reports for business stakeholders.
- Wrote shell scripts to automate repetitive tasks.
- Received training on Spring Boot, Java and SQL and scored highest in the training cohort.

EDUCATION

Bachelor of Technology in Computer Science, Jalpaiguri Government Engineering College 07/2016 – 07/2020 | Jalpaiguri, WB

- DSA, Computer Architecture, Operating Systems

SKILLS

Languages and Frameworks
Java, Typescript, Spring Boot, NodeJs, Golang, Serverless

Architecture and Protocols
System Design, Low Level Design, API Design, Distributed Systems, Microservices, Object Oriented Principles, Operating Systems, Multithreaded Programming, Authentication, REST, gRPC

Data, Infrastructure and Observability
SQL, PostgreSQL, AWS Lambda, State Machine, SNS, SQS, Kinesis, OpenSearch, S3, CloudWatch, Datadog, CircleCi, RabbitMq

AI and AI Assisted coding
Claude Code, Conductor, AI Bot (veera), MCP, AI OCR extraction, RAG
